**VERSION WITH MARKINGS TO SHOW CHANGES MADE**

**IN THE CLAIMS:**

Please **AMEND** claims 37, 40 and 41 as follows:

37. (ONCE AMENDED) A method of displaying a three-dimensional shape model onto a two-dimensional plane, characterized in that a [regular] polyhedron containing therein whole or a part of the three-dimensional shape model is also displayed, wherein at least a depth of a control point on the three-dimensional shape model is controlled in accordance with a position of the polyhedron.

41. (ONCE AMENDED) An apparatus for displaying a three-dimensional shape model onto a two-dimensional plane, comprising:

[a] means for calculating a [regular] polyhedron containing therein whole or a part of the three-dimensional shape model;

a pointing device;

[a] means for judging a relative positional relationship between a point designated by the pointing device and [the] a position of said polyhedron; and

[a] means for changing a display mode of said three-dimensional shape model in accordance with the result of the judgment, wherein at least a depth of a control point on the three-dimensional shape model is controlled in accordance with the position of the polyhedron.
